CIV-Flex ™ – Polyurethane

In accordance with the imposed standards, it is now mandatory that transducer covers are used when intra-operative and endocavity examinations are undertaken.

The CIV-Flex latex-free range offers safe and effective protection and eliminates the chance of allergic reactions for latex-sensitive patients and professionals.

The sterile covers are made of soft, durable polyurethane which offers comfort for patients and adapts perfectly to any type of transducer.

Each cover kit includes: Sterile Polyurethane Cover, Gel Pouch and Elastic Bands. This offers an excellent infection control solution for medical staff, as all the required accessories are supplied in one kit.
